

-17-

What is claimed:

1. A patient therapy and monitoring system comprising:
at least one implanted device in a patient;
a home monitoring system in data communication with said at least one
5 implanted device;
means for providing visual and verbal feedback to the patient integrated with
said home monitoring system; and
a remote expert station in a bi-directional data communication with said at
least one implanted device and said home monitoring system.
10
2. The system of claim 1 wherein said at least one implanted device continuously
provides patient data to said home monitoring system.
3. The system of claim 1 wherein said home monitoring system is configured
15 to receive and process multiple inputs.
4. The system of claim 3 wherein said multiple inputs include lifestyle
information.
5. The system of claim 3 wherein said multiple inputs include environmental
20 information.
6. The system of claim 3 wherein said multiple inputs include food data
stored in a storage system in data communications with said home monitoring system.
25
7. The system of claim 3 wherein said multiple inputs include medicine
administration and inventory control means in data communications with said home
monitoring system.
8. The system of claim 1 wherein said means for providing visual and verbal
30 feedback includes a patient notification based on physician treatment plan.

-18-

9. The system of claim 3 wherein said inputs include patient manual entry of information pertaining to the patient's health.

10. The system of claim 1 wherein the remote expert station includes means for a physician to review and monitor current and long-term trends of the patient's health.

11. The system of claim 1 wherein the at least one implanted device includes a pacemaker, ILR, defibrillator, cardioverter, drug pump, neurostimulator or a hemodynamic monitor.
